

ACTIVATE CHARGING STATION SERVICES WITH THE CHARGEPOINT NETWORK

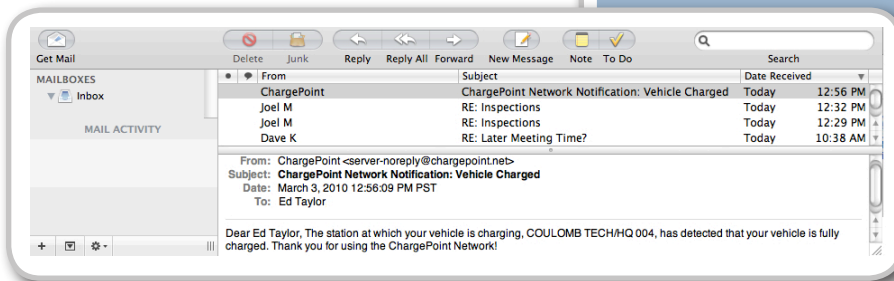

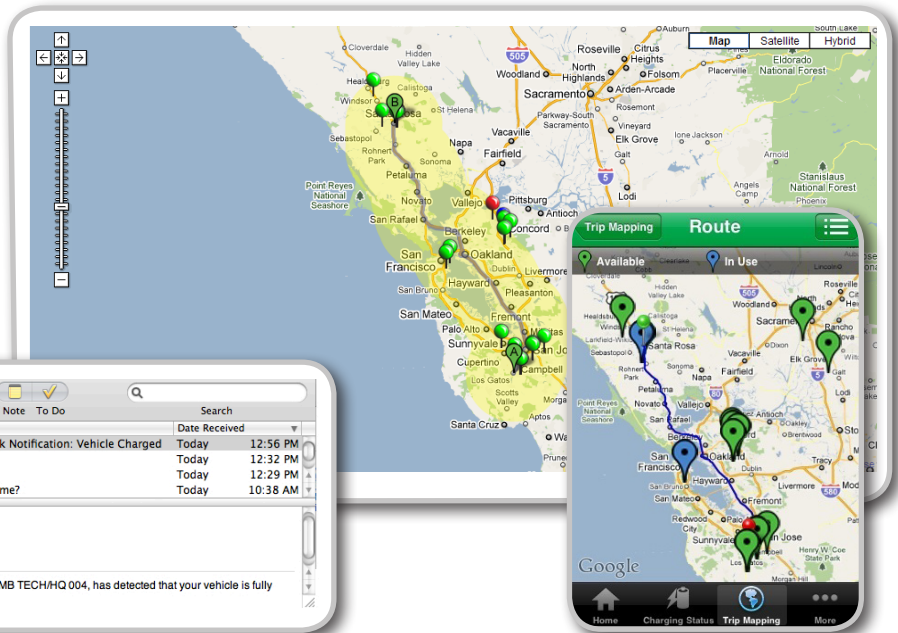

Coulomb Technologies ChargePoint® Network is the most advanced, easy-to-use electric vehicle charging infrastructure for municipalities, corporations and utilities. Electric Vehicle (EV) charging is delivered via ChargePoint® Networked Charging Stations which cover the entire range of Level I, Level II, and DC Fast electric vehicle charging needs. Charging stations connected to the ChargePoint Network provide additional services that provide more value for charging station owners. The ChargePoint Network Standard Service combines Coulomb Technologies' software applications and network operation services so that station owners can quickly and easily connect their charging stations to the ChargePoint Network to maximize the full benefits of their charging system.

Provide Driver Assistance

The ChargePoint Network takes care of drivers so you don't have to. Drivers can locate charging stations along their route via the ChargePoint Network Map and can call the toll free number displayed on each ChargePoint Networked Charging Station to access Coulomb Technologies' Driver Support Service. The service, available 24 hours/365 days per year, provides driver assistance from courteous and knowledgeable customer support representatives.

Drivers, using the ChargePass™ Card, can elect to receive Email or text notifications from the ChargePoint Networked Charging Station their EV is connected to, alerting them if their vehicle is completely charged, or if their charging session is interrupted for any reason (such as a disconnected cable or a ground fault).

Generate revenue

Choose to offer your EV charging services for free or for a fee. Use the ChargePoint Network Station Manager to configure your charging station's pay-per-use features to establish parking services at rates that can vary by day, time of day, and individual customer or group of customers. The ChargePoint Flex Billing Service ensures that fees are automatically collected from the driver, and transferred directly to your account(s).

Host Revenue Reports Export as CSV

Host Name	Gross Amount(\$)	Flex Billing Service Fee (\$)	Net Revenue (\$)
Coulomb Tech	\$15,826.00	\$2,388.00	\$13,438.00

Radio Group	Gross Amount(\$)	Flex Billing Service Fee (\$)	Net Revenue (\$)
Financial District	\$8,500.00	\$738.00	\$7,762.00
City Hall	\$2,900.00	\$518.00	\$2,382.00
Northwest Suburbs	\$2,750.00	\$556.00	\$2,194.00
Town Center Mall	\$878.00	\$416.00	\$462.00
Fair Grounds	\$788.00	\$160.00	\$628.00

Provide high reliability

Ensure your charging station network is reliable. ChargePoint Network Operation Services provide secure, robust network communications and management. The archiving feature of the ChargePoint Network Operation Services allows quick replacement and provisioning of charging station hardware at anytime.

Advertise

Advertise your brand and build driver loyalty using the ChargePoint Networked Charging Stations' scrolling banner display. Configure the station display with the ChargePoint Network Station Manager to greet drivers or to announce special incentives, in multiple languages. ChargePoint Networked Charging Stations appear on the ChargePoint Network map, allowing drivers to locate charging stations.

Eliminate energy theft and enhance safety

The ChargePoint Network provides drivers multiple access options to ChargePoint Networked Charging Stations, including ChargePass cards and major credit cards. ChargePoint Networked Charging Stations will only energize a charging session if it is in good working order, the user is safely isolated from electricity, and access is authorized by the ChargePoint Network.

Optimize return on investment and measure green initiative success

Measure green initiative success and optimize your return on investment with station usage data collected by the ChargePoint Network. For each charging station, the Station Manager provides access to usage details, energy consumed data, station availability, and greenhouse gas (GHG) savings trends. Data can be exported and combined with data from other systems to track costs, calculate savings, and monitor efficiencies of the electric vehicle charging system.
