

Providing Electric Vehicle Charging for Employees

THE CHALLENGE

If you're a sustainability, facilities or transportation services officer who wants to provide electric vehicle (EV) charging services for employees, you know you have to deliver those services in a way that doesn't increase the workload of IT, parking, security or reception staff. You also know you'll need the flexibility to change your operations over time as your needs change, and an easy way to report the ongoing success of the program.

THE SOLUTION

The ChargePoint® Corporate and Commercial Plans are cloud-based solutions for managing electric vehicle charging services that take no IT staff to deploy or maintain and that include driver support. They give you the control and flexibility you need to manage EV charging for employees, and the data you need to track and report program success.

Employer Vision

"We've made it cleaner, cheaper & faster for our employees to get to work."

"Our company is a great place to work. We attract and retain top talent."

"We're making a significant contribution to the community and the environment."

The ease of a cloud-based solution that is effortless to deploy and maintain, includes driver support, and handles all billing should you decide to collect payment from employees

- Deploy quickly and effortlessly. The solution takes no IT staff to deploy or maintain, and software updates require no IT involvement. Even the stations get upgraded for you, remotely. Your entire system stays up-to-date.
- Ensure a good experience for your employees with 24x7 driver support, which is included.
- If you decide to collect payment from employees, do so without being involved in the billing. Fees collected are deposited monthly into your account.

The flexibility to set up your EV charging operations exactly how you need them

- Decide whether and what employees should pay for usage. Set different fees by group, station, time of day, or individual. Decide whether to let employees reserve stations.
- Keep employees informed without effort. Employees see the location and real-time availability of your stations from the ChargePoint smart phone apps. They also see charging stats as their car charges, and get notified when charging is complete.
- Use employee badges for authentication by affixing a ChargePoint RFID sticker.
- Integrate with IT systems including your building management system for functions such as selectively reducing energy dispensed.

The intelligence to track and report program success, including data for benefit tax reporting

- Track usage and costs with rich data. Analyze: station utilization so you can easily plan for growth; the benefit each employee has received so you can report benefits as required by law; greenhouse gas emissions avoided so you can monitor the ongoing progress and success of sustainability initiatives; energy dispensed vs. payments collected so you can track program costs.
- View the current occupancy status of all your stations at any time.
